### Investment Risks

Equity securities (stocks) are generally more volatile and carry more risk than fixed income securities (bonds) and money market investments. The net asset value per share of this Fund will fluctuate as the value of the securities in the portfolio changes. Common stocks, and funds investing in common stocks, generally provide greater returns over long time periods than fixed income securities. Foreign investing involves risks not typically associated with U.S. investments, including adverse political, social and economic developments and differing auditing and legal standards. The Fund is subject to market risk. Stocks may decline due to general market and economic conditions or due to company specific prospects and circumstances. Please see the Fund's prospectus for additional information.

### Glossary of Terms

The S&P 500 Index is an unmanaged index that is widely regarded as a gauge of the U.S. equities market. This index includes 500 leading companies in leading industries of the U.S. economy. Although the S&P 500 focuses on the large cap segment of the market, with approximately 75% coverage of U.S. equities, it is a reasonable proxy for the total market.
